genomic sequence was searched against NCBI NonRedundant Protein database, nr (ftp://ncbi.nlm.nih.gov/blat/db) and the cDNA sequence database at RGP or DDBJ. Protein homologies of the coding regions were searched against NCBI NonRedundant Protein database with BLASTP. ESTs represent the identified cDNA sequences using BLASTN with the corresponding DDBJ accession no. and RGP clone ID. Full-length cDNAs represent the identified cDNA sequences using BLASTN with the corresponding DDBJ accession no.

A gene with identity or significant homology to a protein is classified based on the protein name to indicate the homology level such as same name, 'putative-' and '-like protein'. A gene without significant homology to any protein but with full-length cDNA or EST homology (covering almost the entire length of partial sequence) is classified as an 'unknown' protein. A gene predicted by two or more gene prediction programs is classified as a 'hypothetical' protein according to IRGSP standard. A gene predicted by a single gene prediction program is also classified as a 'hypothetical' protein and is included as a probable 'hypothetical' protein and as entry to spe of the sequence of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  /organism="Oryza sativa (

```

pINDEX1 is a binary vector designed for glucocorticoid-inducible gene expression in plants and is optimized for use in rice; pINDEX1 is part of a series of four pINDEX vectors (Genbank Accession Numbers AF2949979-AF294982). pINDEX vectors are based on parts of pCAMBIA-1300 encoded by GenBank Accession Number AF234296 and pTA7002 (Aoyama, T. and Chua N.-H., 1997, Plant J. 11:605-612). Direct Submission Submitted (11-AUG-2000) Dept. for Molecular Plant Sciences, other sequences; artificial sequences; vectors.

This invention relates to a novel isolated regulatory nucleic acid sequence that is useful in the field of plant molecular biology. Specifically, it refers to a regulatory gene of the rice GOS2 gene that can drive expression of an associated nucleic acid sequence in a non-monocotyledonous plant or plant cell. The present invention describes introducing a regulatory sequence that results in constitutive expression (with levels similar to that of CaMV 35S) of an isolated or endogenous

nucleic

acid sequence in a transgenic non-monocotyledonous plant.

Use of a regulatory nucleic acid sequence for driving expression associated nucleic acid sequence in a non-monocotyledonous plant

of an or plant

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ક
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Ś
The invention relates to modifying plant growth and development and convolves introducing a genetic modification in the plant and selecting convolves introducing a genetic modification in the plant and selecting convolves introducing a genetic modification in the plant acid encoding a convolve modulated expression in the plant of a nucleic acid encoding a convolve modified protein protein, provided that the modified growth and convolve modified plant growth and development is noreased tolerance or convolve modified plant growth and development is increased yield, preferably convolve modified plant growth and development is increased yield, preferably convolve modified encoding a metallothionein comprises introducing an isolated convolve denoting a metallothionein protein encodes a type 2 metallothionein conditional protein and is derived from a plant, preferably a dicotyledonous plant, more constitutive promoter, preferably the rice GS2 promoter. The constitutive promoter is not increased metal accumulation or increased tolerance or resistance to abiotic stress. They are also useful as a growth regulator. The method is useful for modifying plant growth and development is not increased metal accumulation or increased tolerance or constitutive to abiotic stress. They are also useful as a growth regulator.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Modifying plant growth and development for altering growth characteristics in plants, comprises introducing a genetic modification in the plant and selecting modulated expression of a nucleic acid encoding a metallothionein protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Synthetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  MT2a; plant growt metallothionein;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                र्
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            S
                                                      The patent discloses a DNA molecule, useful as matrix attachment region (C) (MAR) or scaffold attachment region, to increase the expression of genes cintroduced in transformed plants. MARs are located in non-transcribed CC regions of genes and form the physical boundaries of individual DNA cloops. They are rich in adenosine and thymine bases and contain certain CC conserved sequence elements and structural features. They are about 300-CC plants can be achieved by use of MAR. They can also reduce the position CC plants can be achieved by use of MAR. They can also reduce the position CC effect in transgenic organisms. The present DNA sequence is the rice CC transcription vector pGOS2-lpt, that contains a hygromycin selectable CC marker driven by the 35S promoter and a GOS2/GUS/nos cassette (GOS2 cregion). The GOS2 transcription initiation region in this construct is comprised of 1010 bp of promoter and 170 bp of untranslated 5' leader CC interrupted by a 1100 bp intron sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     An isolated DNA molecule for use as a matrix attachment region increase expression of genes introduced in transformed plants c 298 base pair sequence described in the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Matrix Attachment Region; MAR; rice transformation vector; pGOS2-hpt; scaffold attachment region; gene expression; transgenic organism; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      AAD01285

                                                                                                                                                                                                                           The patent discloses a DNA molecule, useful as matrix attachment region (MAR) or scaffold attachment region, to increase the expression of genes introduced in transformed plants. MARs are located in non-transcribed regions of genes and form the physical boundaries of individual DNA loops. They are rich in adenosine and thymine bases and contain certain conserved sequence elements and structural features. They are about 300-2000 bp in length. Increased levels of expression of DNA introduced into plants can be achieved by use of MAR. They can also reduce the position effect in transgenic organisms. The present DNA sequence is the rice transformation vector pArGOS2Af-hpt, identical to the vector pGOS2-hpt, except that it contains a MAR dimer-2 positioned 5' to the GOS2 transcription initiation region and the MAR dimer-1 positioned 3' to the nos 3' UTR (untranslated region). This vector is used to efficiently transform monocot plants like rice
                                                                                                                                                                                             Sequence 10629
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             An isolated DNA molecule for use as a matrix attachment region to increase expression of genes introduced in transformed plants comprises 298 base pair sequence described in the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            01-DEC-1998;

Improving plant growth characteristics, e.g. increased yield, increased growth rate, or modified architecture, comprises increasing expression, activity and/or levels in a plant of B-type cyclin dependent kinase.

Disclosure; SEQ ID NO 15; 79pp; English.

CC CDX protein. INDEPENDENT CLAIMS are also included for: plant of a b-type CC gene/nucleic acid encoding a B-type CDK protein, or (ii) a nucleic acid encoding a B-type CDK protein, or (iii) a nucleic acid comprising (i) a B-type CDK (C gene/nucleic acid encoding a B-type CDK protein, or (iii) a nucleic acid companies at least one of the 7 (C anino acid position changes or at least one of the 8 amino acid position changes or at least one of the 8 amino acid position capable of driving expression of the nucleic acid of (i) or (ii), and coptionally (iv) a transcription termination sequence; a method for C cincreased yield, increased growth rate, or modified architecture, which CC increased yield, increased growth rate, or modified architecture, which CC characteristics are improved relative to growth rate, or modified architecture, which CC characteristics, e.g. increased yield, increased growth rate, or modified architecture, which CC characteristics, e.g. increased yield, increased growth rate, or modified architecture, which CC care the plant has increased yield, increased growth rate, or modified architecture, the plant has increased growth characteristics of CC corresponding wild type plants; a composition comprising a protein comprising a sequence of 39, 31, or 315 amino acid growth rate corresponding wild type plants; a composition CC acids (RVEN SEQ ID NOS: 2-6), or its homologue, derivative, or active fragment cORs; a screening method for identifying substantially connactive plant CDKs; but are capable of binding to plant CDKs; mutant CC cyclin as listed in the disclosure; or where the mutants CC cyclin but not to cyclin as listed in the disclosure; an isolated conversing any of the S sequences of 294 amino acid each (SEQ ID NOS: 9-10). The plant comprising a homologue, derivative or active fragment comprised at least one of the 7 amino acid conversion changes or at least one of the 8 amino acid position changes or at least one of the 8 amino acid position changes in the disclosure, (ii) a nucleic acid c a plant of a nucleic acid encoding a B-type cyclin dependent kinase (CDK) protein and/or increasing activity and/or levels in a plant of a B-type Improving plant growth characteristics, growth rate, or modified architecture, c e.g. increased yield, increased

cc effected by introducing and expression in a plant a B-type CDK calculation of the B-type CDK delevide from a plant is from a discovyladonous plant.

Cc preferably from the family Brassicacese, specifically Arabidopsis B.1 CC thallans. The B-type CDK is a class I B-type CDK is comprised as sequence of 930 by [SRO] ID NO: 10 or CDK B1/2 from A. thallans. The B-type CDK is a class 2 B-type CDK is a class 2 B-type CDK is a class 3 B-type CDK is a class 2 B-type CDK is a class 3 B-type CDK is a class 3 B-type CDK is a class 4 B-type CDK is a class 4 B-type CDK is a class 2 B-type CDK is a class 4 B-type CDK is a class 4 B-type CDK is a class 4 B-type CDK is a class 5 B-type CDK is a class 5 B-type CDK is a class 6 Comprises a sequence of 930 by [SRO] ID NO: 10, or its portion, or a mucleic acid comprises a sequence of 580 pb (SRO] ID NO: 3, and where the CDK B1/2 protein comprises a sequence of 580 pb (SRO] ID NO: 3, and where the CDK B1/2 protein comprises a sequence of 580 pc IN NO: 3 and where the CDK B1/2 protein comprises a sequence of 580 pc IN NO: 4 or its bomologue, derivative or active fragment. The CDK B1/2 protein comprises a sequence of 590 pc IN NO: 50 or its portion, or a mucleic acid comprises a sequence of 590 pc IN NO: 50 or its bomologue, derivative or active fragment. The B-type CDK is a class 5 pc IN NO: 50 or its bomologue, derivative or active fragment is protein comprises a sequence of 590 pc IN NO: 4 or its bomologue, derivative or active fragment is protein or protein of protein of protein of protein or its bomologue, derivative or active fragment is comprises a sequence of 590 pc IN NO: 50 or its portion, or a mucleic acid year.

CC SEQ ID NO: 5, and where the CDK B1/2 protein comprises a sequence of 590 pc IN NO: 50 or its portion or active fragment and acid year in the mologue, derivative or active fragment of a B-type CDK protein or its protein or protein or active fragment of a B-type CDK protein or its protein or acid year in the mologue of protein or protein or acid year in the cla amino acid position changes listed in the disclosure, or (vi) alternative splice variants of nucleic acids of (i) to (v), where the alternative splice variants encodes an amino acid comprising at least one of the 7 amino acid position changes or at least one of the 8 amino acid position changes listed in the disclosure; and a CDK mutant comprising (i) an amino acid sequence of SEQ ID NOS: 9-13, or (i) a fragment of SEQ ID NOS: 9-13, or (ii) a fragment of SEQ ID NOS: 9-13 where the fragment comprises at least one of the 7 amino acid position changes or at least one of the 8 amino acid position changes listed in the disclosure. Preferred Method: Increasing expression is degenerate as a result of the genetic code, (v) allelic variants of (i) to (iv), where the allelic variant encodes an amino acid comprising at least one of the 7 mmino acid position changes or at least one of the 8 amino acid position changes listed in the disclosure, or (vi) alternative (claimed).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to a glyphosate resistant rice 5-enolpyruvylshikimate phosphate synthase (EPSPS) gene. This gene can be used to produce plant tissue and/or morphologically normal fertile whole plants which are tolerant or resistant to glyphosate herbicide, and in the production of a herbicidal target for the high throughput in vitro screening of potential herbicides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 898
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel polynucleotide encoding the rice 5-enolpyruvylshikimate phosphate synthase, used to produce glyphosate tolerant or resistant plants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Glyphosate; 5-enolpyruvylshikimate phosphate synthase; EPSPS; herbicide resistance; ss.

```
CC (EPSSS) genomic DNA (AAC87188). The invention also relates to an CC expression cassette comprising, in the 5'-3' direction, one or more Crice EPSSS promoter, genomic DNA encoding a rice EPSSS chropolast transcriptional enhancer elements selected from AAC87190-C87196), the CC rice EPSSS promoter, genomic DNA encoding a EPSPS protein modified such that CC it is resistant to glyphosate (AAC87199), and a transcriptional CC terminator. The glyphosate (AAC87199), and a transcriptional CC entaining two amino acid substitutions relative to the corresponding CC entaining two amino acid substitutions relative to the corresponding CC epsps sequences identified via screening with a rice EPSPS intronic CC sequence; vectors and host plant cells comprising a nucleic acid sequence of the invention; transgenic plants (and tissues and seeds thereof) CC comprising a nucleic acid sequence of the invention, optionally further CC enmatode, stress or herbicide resistance protein; and methods of CC constructs of the invention are used to produce a wide variety of CC constructs of the invention are used to produce a wide variety of CC ensistant plants produced are particularly maize, soybean, cotton, sugarbeet and canola, but also other field crops, fruits and vegetables, turf and forage grasses and nut-producing plants. The plants are optionally resistant to insects, fungi, viruses, bacteria, nematodes, stress, desiccation and/or other herbicides. They can be used in the producing of a herbicidal target for the high throughput in vitro CC enhancer element which may be used in the rice EPSPS expression cassette.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           29-JUL-199;

characteristic when they are expressed in a plant. The DNA sequences of the invention are useful for producing plants with an altered metabolic CC characteristic, such as: altered acid metabolism, alcohol metabolism, cc fatty acid metabolism, branched fatty acid metabolism, alkaloid or other CC base metabolism, altered amino acid metabolism, altered ester metabolism, cc altered glyceride metabolism, altered phenolic metabolism, or cc arbohydrate metabolism, altered sterol, oxygenated terpene, or cc isoprenoid metabolism, altered sterol oxygenated terpene, or cc invention may be used to provide disease resistance in a plant and gene cc shuffling or sexual PCR procedures. The present nucleic acid represents a CC DNA sequence of the invention.
     Novel genes that confer altered metabolic characteristics in Nicotiana benthamiana plants, useful for altering the levels of metabolites e.g. acids, fatty acids, amino acids, carbohydrates, hydrocarbons and stero
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Weglarz T,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              nucleic acid molecules that confer altered visual phenotypes in plants. Specifically, it refers to modifications of plant architecture and/ or leaf surface features in plants, such as chlorotic, bleaching, etching, wet leaf, stunting, elongation and texture phenotypes, which are thought will be agronomic traits beneficial to the farmer. As such, these novel phenotypes can affect growth regulation i.e. useful for creating dwarf varieties, exhibit resistance to insects or heat stress, confer changes in pigment content such that plants have enhanced vitamin production or delayed senescence and also for example produce plants that control the production of ethylene. Furthermore, the present invention comprises generating transgenic plants, as well as reproducibly altering the visual phenotype of plant seeds, plant tissues and plant cells containing the polynucleotides described herein. This polynucleotide is a homologue of a large that confers an altered visual phenotype when expressed in
                                                                                                                                                                                  altered metabolic characteristic; plant; acid metabolism; alcohol metabolism; fatty acid metabolism; alcohol metabolism; fatty acid metabolism; alkaloid metabolism; branched fatty acid metabolism; alkaloid metabolism; amino acid metabolism; ester metabolism; glyceride metabolism; phenolic metabolism; carbohydrate metabolism; sterol metabolism; terpone metabolism; isoprenoid metabolism; alkene metabolism; alkene metabolism; alkene metabolism; alkene metabolism;

The DNA sequences of the invention are useful for producing plants with an altered metabolic characteristic, such as: altered acid metabolism, alcohol metabolism, fatty acid metabolism, branched fatty acid metabolism, alkaloid or other base metabolism, altered amino acid metabolism, altered ester metabolism, altered glyceride metabolism, altered phenolic metabolism, altered carbohydrate metabolism, altered sterol, oxygenated terpene, or isoprenoid metabolism, altered sterol, oxygenated terpene, or isoprenoid metabolism, altered sterol, oxygenated terpene, or isoprenoid metabolism, altered sterol, oxygenated terpene, or hepping, which is altered sterol oxygenated terpene, or isoprenoid metabolism, altered sterol, oxygenated terpene, or hepping, altered or altered blism and sequences of the invention may be used to provide disease resistance in a plant and gene shuffing or sexual PCR procedures. The present nucleic acid represents a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Novel genes that confer altered metabolic characteristics in Nicotiana benthamiana plants, useful for altering the levels of metabolites e.g. acids, fatty acids, amino acids, carbohydrates, hydrocarbons and sterols.

As such, these novel phenotypes can affect growth regulation i.e. useful for creating dwarf varieties, exhibit resistance to insects or heat stress, confer changes in pigment content such that plants have enhanced vitamin production or delayed senescence and also for example produce plants that control the production of ethylene. Furthermore, the present invention comprises generating transgenic plants, as well as reproducibly altering the visual phenotype of plant seeds, plant tissues and plant cells containing the polymucleotides described herein. This polymucleotide is a homologue of a DNA sequence that confers an altered visual phenotype when expressed in plants, the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This invention relates to the identification and isolation of novel nucleic acid molecules that confer altered visual phenotypes in plants. Specifically, it refers to modifications of plant architecture and/ or leaf surface features in plants, such as chlorotic, bleaching, etching,

                                                                                                                                              Ś
                                                                                                                                                                                                                                                              The invention relates to plant nucleotide sequences that direct seed, cleaf- and/or stem-, panicle-, root- or pollen-specific or -preferential or constitutive transcription of an operatively linked nucleic acid or constitutive transcription of an operatively linked nucleic acid segment. The invention also relates to a method for augmenting a plant celement of identifying a gene, where ite expression is altered in the seed, leaf, stem, panicle, pollen, root or is constitutive in a plant cell. The plant is a cereal, e.g. soybean, alfalfa, sunflower, canola, cotton, peanut, tobacco or sugar beet, preferably maize, barley, cencode are useful for manipulating crop plants to alter or improve checken they concern the polymucleotides and the polypeptides they concern are useful for manipulating crop plants to alter or improve phenotypic characteristics, to produce large quantities of oil or proteins, to incur resistance to insecticides, viruses or fungi, and to incur stress tolerance (e.g. salt, cold or drought) to ensure the plants have a high mutritional value with reduced apical dominance or dwarfism, carly flowering or altered metabolic pathways. This sequence represents a plant nucleic acid of the invention. Note: The sequence data for this patent did not form part of the printed specification but was obtained in clecture of the printed specification but was obtained in clecture of the printed specification but was obtained in clecture the plants.
                                                                                                                                                                                    Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to novel abiotic stress responsive polynucleotides and polypeptides. Also disclosed are vectors, expression cassettes, host cells, and plants containing such polynucleotides. Also disclosed are methods for using the polynucleotides and polypeptides to alter the responsiveness of a plant to abiotic stress. The invention is useful in agriculture. The nucleic acid is useful for determining whether a test plant has been exposed to an abiotic stress condition. It is also useful for selecting an agent that alters abiotic stress regulated polynucleotide expression in a plant cell, and to identify a homolog or ortholog to an abiotic stress responsive polynucleotide. The nucleic acid molecule and the polypeptide encoded by it are useful in altering the responsiveness of a plant to an abiotic stress, such as cold stress, salt stress, osmotic stress or any of their combinations. The present sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 2000 BP; 676 A; 404 C; 358 G; 562 T; 0 U; 0 Other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to novel abiotic stress responsive polynucleotides cand polypeptides. Also disclosed are vectors, expression cassettes, host cells, and plants containing such polynucleotides. Also disclosed are methods for using the polynucleotides and polypeptides to alter the cresponsiveness of a plant to abiotic stress. The invention is useful in agriculture. The nucleic acid is useful for determining whether a test plant has been exposed to an abiotic stress condition. It is also useful for selecting an agent that alters abiotic stress regulated polynucleotide expression in a plant cell, and to identify a homolog or ortholog to an abiotic stress responsive polynucleotide. The nucleic acid molecule and the polypeptide encoded by it are useful in altering the cressonsiveness of a plant to ancoded by it are useful in altering the stress, osmotic stress or any of their combinations. The present sequence is used in the exemplification of the invention
                                                                                                                                                                                                                                                                                                                Matches 215;
                                                                                                                                                                                                                                                                                                                                                                     Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         22-JUN-2001;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           RESULT 15
                                                                                                                           The invention relates to cancer-associated proteins (CAP) and the cancer-associated (CA) nucleic acids encoding them. The invention also relates to a method for treating cancers involving administering to a patient an inhibitor of CAP, and a method of screening for anticancer activity in a potential drug involving providing a cell that expresses a CA gene, contacting a tissue sample derived from a cancer cell with an anticancer drug candidate and monitoring the effect of the anticancer drug candidate on expression of the CA gene. The CAP proteins are useful for detecting cancer associated with expression of a CAP protein in a test cell sample and for screening for a bioactive agent capable of modulating the activity of a CAP protein. The CA nucleic acids are useful for diagnosing cancer, involving determining the expression of a CA nucleic acid in a tissue. This sequence represents a human CA gene of the invention.
